

SAM-e

S-Adenosyl Methionine
400

FULL POTENCY

USAGE: Take 1 tablet 1 or 2 times per day on an empty stomach or as directed by your qualified healthcare professional.

WARNING: Individuals using prescribed medications such as antidepressants, including Selective Serotonin Re-Uptake Inhibitors (SSRIs) and MAO Inhibitors should consult a physician before using this product. Individuals with Parkinson's disease, bi-polar disorder or manic depression should not use SAM-e. Do not use if pregnant or nursing. Do not exceed recommended intake. May cause gastrointestinal upset in some persons. If you experience discomfort, discontinue use.

Jarrow Formulas® SAM-e 400 is foil blister-packed to maximize stability and safety. DO NOT use if outer seal of blister pack is broken.

Full Potency 400 mg SAM-e (net yield) is derived from 800 mg of SAM-e tosylate disulfate.

For best results, use with Jarrow Formulas® JarroSil®, the biologically Activated Silicon®.

Natural SAM-e 400

Jarrow Formulas® SAM-e 400 provides a full 400 mg SAM-e (net yield) from 800 mg of SAM-e tosylate disulfate. SAM-e 400 is manufactured under low temperature and low humidity and is enteric-coated to ensure a biologically active product.

Contains More of the Active S,S Form

Found in all living cells, SAM-e is a metabolite of methionine (an essential amino acid). SAM-e is a chiral molecule and consists of two forms: (S,S) SAM-e and (R,S) SAM-e. The biologically active form is the (S,S) structure, while the (R,S) structure is biologically inactive. Jarrow Formulas® SAM-e is made naturally by microbiological fermentation and then specially processed without chemical solvents to preserve 68-80% (S,S) SAM-e, the highest active level available.

SAM-e has been clinically shown to have the following benefits:

Joint Strength

SAM-e supports the production of healthy connective tissue through transsulfuration.* In this process, critical components of connective tissue known as glycosaminoglycans (GAGs), including glucosamine and chondroitin, are sulfated by SAM-e metabolites to yield sulfated GAGs, such as glucosamine sulfate and chondroitin sulfate.*

Brain Metabolism

SAM-e methylation reactions are involved in the synthesis of neurotransmitters such as L-DOPA, dopamine and related hormones, serotonin, epinephrine and phosphatidylcholine (a component of lecithin).*

Liver

SAM-e metabolism supports the synthesis of glutathione (GSH) and glutathione-dependent enzymes (glutathione peroxidase, glutathione reductase and glutathione-S-transferase), which are components of the body's endogenous antioxidant network and important for liver function, including phase II detoxification.*
