\*These statements have not been evaluated by the FDA. This product is not intended to diagnose, treat, cure, or prevent any disease.

In a man's brain there is a complex chain of signals called the hypothalamic-pituitary axis. The testosterone produced in the testes is regulated by this chain. At onset of puberty, there is a rapid increase in the production of testosterone, but begins to show from the age 30 onward. High T Black Hardcore Formulation has been scientifically formulated to support the effects of testosterone deficiency.
