**WOMEN'S Prenatal Program**

Nutritional support for you and your baby before, during and after pregnancy. This program features a balanced nutritional blend of vitamins, minerals and antioxidants to supplement a healthy diet.

- **Folic Acid**  
 Provides 1000 mcg of folic acid, which is critical during the earliest weeks of pregnancy when a baby's organs are forming. Adequate intake of folic acid in a healthy diet before and during early pregnancy may reduce the risk of birth defects of the brain and spinal cord. Also required for cell growth and DNA formation.\*
- **Algae-Based DHA**  
 Features DHA from marine algae. Supplementing with DHA, an omega-3 fatty acid, helps pregnant and nursing mothers replenish the DHA necessary for a baby's healthy brain and eye function development.\*
- **Calcium**  
 1200 mg of calcium, which is vital during pregnancy, especially during the third trimester when fetal bones begin to calcify. If a mother's calcium level drops, her body can pull calcium from her bones, which can result in loss of bone density.\*
- **Iron**  
 Contains 18 mg of iron, iron plays a crucial role in the formation of healthy red blood cells, which are essential to support placental and fetal needs as a mother's blood volume increases.\*
- **Antioxidants**  
 Has antioxidants for protection against harmful free radicals that can destroy healthy cells.\*
