†An 8-week randomized, double-blind, placebo-controlled study of 118 healthy men participating in a supervised resistance training program showed that those taking MyoTOR® had significant increases in mean upper body strength (49.7 lbs vs. 19.4 lbs), mean lower body strength (42.1 lbs vs. 19.2 lbs) and muscle endurance after 8 weeks vs. those who took a placebo with the same exercise. Improvements in strength were seen in as early as 2 weeks. Men on MyoTOR® had greater improvements in muscle strength and upper body endurance vs. those who took a placebo but exercised twice as much.
